SUMMARY

iOS Developer with experience building native applications using Swift, UIKit, MVVM, and Coordinators, with hands-on work in data persistence, API integration, and unit testing. I enjoy creating clean architectures, polished interfaces following Apple's HIG, scalable and maintainable mobile code. In addition to native iOS development, I bring mobile and full-stack experience with React Native, NestJS, and AWS-based services, which helps me collaborate effectively across teams.

SELECTED iOS PROJECTS

- **TaskFlow** – built with Swift, UIKit, MVVM, Coordinators, Alamofire, UI testing, and Core Data.
- **My Calculator** – built with Swift, UIKit, MVVM, dependency injection and XCTest unit testing.

EXPERIENCE

Mobile Developer / Full-Stack – Ikania · 2025 – Present

- Built scalable mobile flows and UI components for a marketplace app connecting providers and producers using React Native, TypeScript, NativeWind, and Zustand.
- Designed navigation and state management patterns for a better product experience.
- Contributed to backend integrations and services using NestJS, Drizzle, JWT, and Serverless, supporting authentication and API consistency across the stack.

Mobile Developer / Full-Stack – Wundertec · 2024 – 2025

- Developed mobile flows and user-facing features for a React Native vehicle rental app using TypeScript.
- Improved internal operations by implementing an express vehicle intake flow, redesigning list views, and the functionality to export large lists.
- Built product features for a medical platform, including prescriptions, appointment scheduling, chat, and video calls, aligning UI behavior with API and business requirements.

Android Developer – TelcoPS · 2023 – 2024

- Built and maintained mobile flows for an internal warehouse app with approval workflows and QR-based navigation across mobile and web.
- Refactored key screens toward MVVM and Clean Architecture to improve maintainability and application stability.
- Improved error handling and QR routing behavior to make item navigation more reliable and reduce flow interruptions.

TECHNICAL SKILLS

iOS: Swift, UIKit, SwiftUI, MVVM, Coordinators, Core Data, XCTest, Dependency Injection, Storyboards, Xcode.

Mobile: React Native, TypeScript, Kotlin.

Backend: NestJS, Express, Prisma, Serverless Framework.

Tools: Git, SQL, Firebase, Docker (Basics), AWS (Basics).

COURSES

Selected courses in iOS and Swift, including “iOS y Swift desde cero”, Meta’s “Advanced Programming in Modern Swift”, and additional iOS app development courses.

PROJECTS

TaskFlow (iOS) · 2026

- Native iOS task management app using Swift, UIKit, MVVM, and Coordinators.
- Implemented CoreData persistence to manage task storage and offline state.
- Integrated network requests with Alamofire and designed clear navigation flows for task assignment and tracking.
- Focused on reusable UI components and a clean, maintainable architecture.
- Added UI testing to improve and validate flows and business logic.

My Calculator (iOS) · 2025

- Native iOS calculator app using Swift, UIKit, and MVVM.
- Implemented real-time expression evaluation and unit conversion flows.
- Used dependency injection and Coordinators to keep the architecture modular and scalable.
- Added XCTest Unit testing to improve reliability and validate business logic.

Memorama (Android) · 2025

- Kotlin-based memory game app designed as a clean and scalable Android foundation.
- Implemented configurable board sizes, solution previews, and game state persistence using SQLite and Google Drive.

More details, screenshots and additional side projects are available on my portfolio: [personal-profile](#).

EDUCATION

Bachelor’s degree in Computer Systems Engineering

Escuela Superior de Cómputo (ESCOM), Instituto Politécnico Nacional · 2019 – 2024

- Participant in the Developer Student Club.

LANGUAGES

- **Spanish** – Native
- **English** – Conversational (B2)
